

I CLAIM:

1. A pivotal handle for a wheeled food service table comprising:  
two elongated parallel right and left bar members;  
said right bar member having a top end and a bottom end, said top end having an arm extending outwardly therefrom and said bottom end having a leg extending outwardly therefrom;  
said left bar member having a top end and a bottom end, said top end having an arm extending outwardly therefrom and said bottom end having a leg extending outwardly therefrom; and  
means for connecting said right and left bar members  
wherein each of said legs has means for pivotably attaching said right and left bar members to a wheeled table, attaching means allowing said bar members to rotate from an upright, operative position to a stored, inoperative position.
2. The pivotal handle of Claim 1 wherein each of said arms has a gripping portion.
3. The pivotal handle of Claim 1 further including means for locking said bar members in an upright, operative position.
4. The pivotal handle of Claim 3 wherein said locking means includes an opening formed in at least one of said legs and a quick release pin with a spring loaded ball inserted therethrough.
5. The combination of a pivotal handle and a wheeled food service table comprising:

a table having a top surface, an underside, and a plurality of wheels attached to said underside of said table;

a handle; and

means for pivotably attaching said handle to said table, said attaching means allowing said handle to rotate from an upright, operative position above said top surface to a stored, inoperative position on said underside of said table.

6. The combination of Claim 5 wherein said handle includes two elongated parallel right and left bar members, said right bar member having a top end and a bottom end, said top end having an arm extending outwardly therefrom and said bottom end having a leg extending outwardly therefrom, said left bar member having a top end and a bottom end, said top end having an arm extending outwardly therefrom and said bottom end having a leg extending outwardly therefrom, and means for connecting said right and left bar members.

7. The combination of Claim 6 wherein each of said arms has a gripping portion.

8. The combination of Claim 6 wherein said attaching means includes a separate socket attached to each of said legs and a plate attached to each of said sockets, said legs rotatably extending through its respective socket and each of said plates also being attached to said underside of said table.

9. The combination of Claim 6 further including means for securing said handle in said stored, inoperative position, said securing means being attached to

said underside of said table for securing at one of said arms on said underside of said table.

10. The combination of Claim 9 wherein said securing means includes a spring clip.

11. The combination of Claim 5 further including means for locking said handle in said upright, operative position.
